Fixes

1. An issue with group bookings using transports to/from locations in DST time zones (**Admin | Transport | Time Zones**) has been fixed. Time zones with multiple records for effective date ranges will no longer cause an unexpected error when editing the group booking or Event Management crew using transports that arrive/depart from locations in that time zone.
2. Fixed an issue where Camp Accommodation emails were sent to the person's default camp instead of the camp they were booked at.
3. The **Night Audit** Extend Transport Schedule functionality has been improved to ensure that the changes are applied only to the future schedule records. [\[#19304\]](#)
4. An issue with inbound CWT PNR processing status update requests sometimes failing with a HTTP 500 Internal Server Error has been fixed.
5. An issue with inbound CWT profile synchronization requests sometimes failing with a HTTP 500 Internal Server Error has been fixed. [\[#19314\]](#)
6. Fixed an issue where comments were not appearing on confirmation emails. [\[#19310\]](#), [# 19326](#)
7. Fixed an issue where Workflow User Groups were not displaying the Delegation menu option.
